File Handling|Lecture

- File handling
- Working with Files
  - Opening a file
  - Closing a file
  - Writing to a file
  - Reading from a file
- Read image and create its copy
  - Moving the cursor
  - Smarter way of opening files

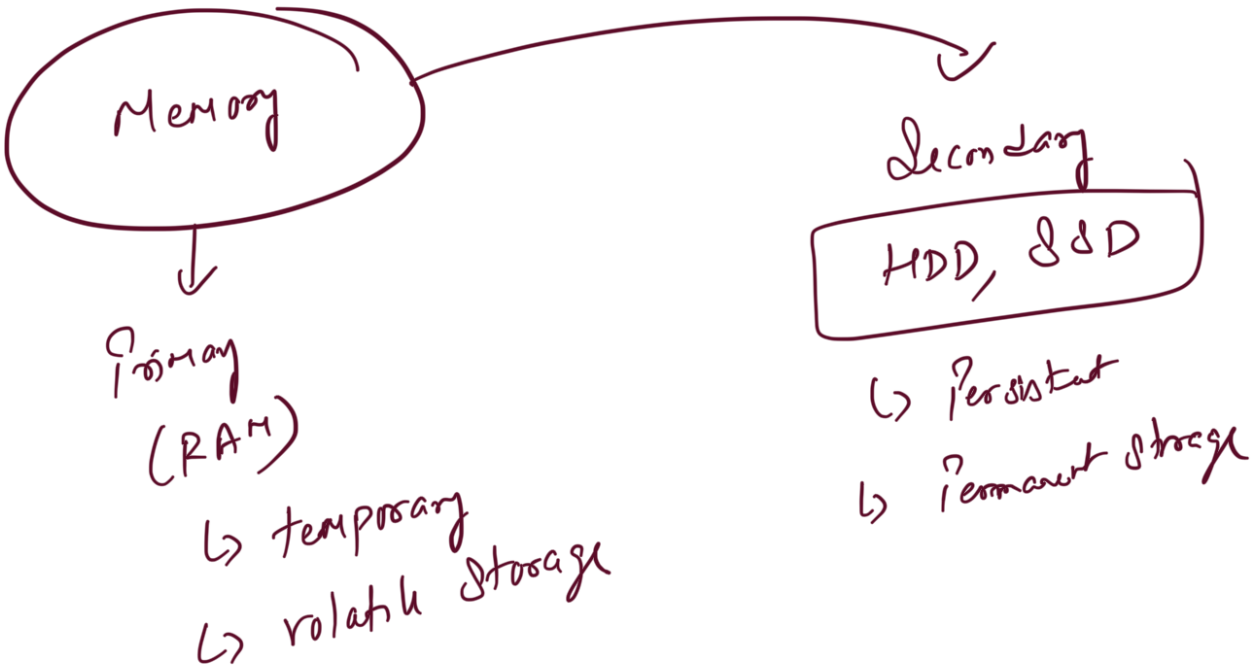

I AM SORRY
YOU SHOULD CLOSE THAT FILE YOU OPENED
imgflip.com

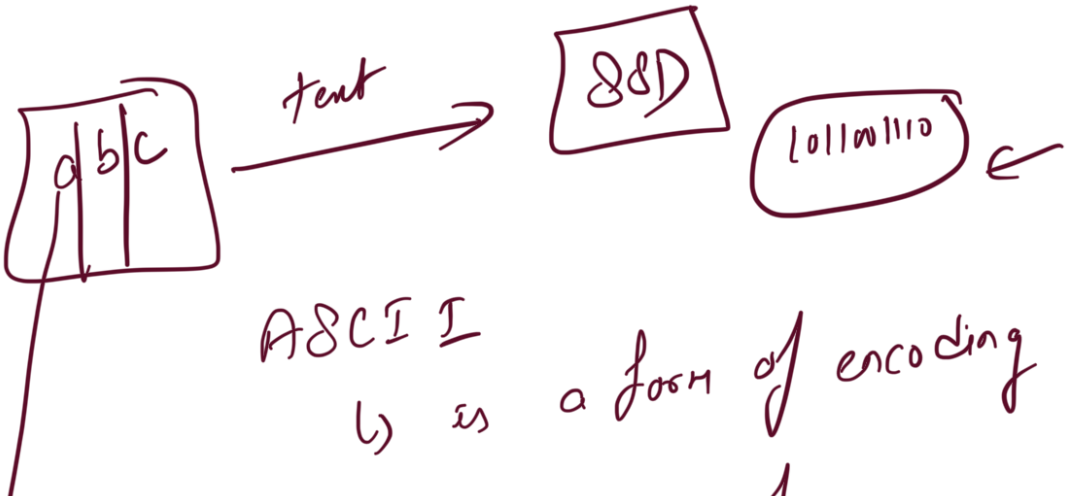

ME LEFT FILE OPENED IN PYTHON
38
I WAS JUST LEARNING FILE HANDLING
imgflip.com

File handling :-

(1) All our variables, classes are loaded on RAM and gets remove as the program done executing.

(2) We need to save them to secondary memory in order to keep the things even when program is done executing.

a b c d e f

97 98 99

Encoding Code point is a unique letter assigned to each character and depends on encoding table being used.

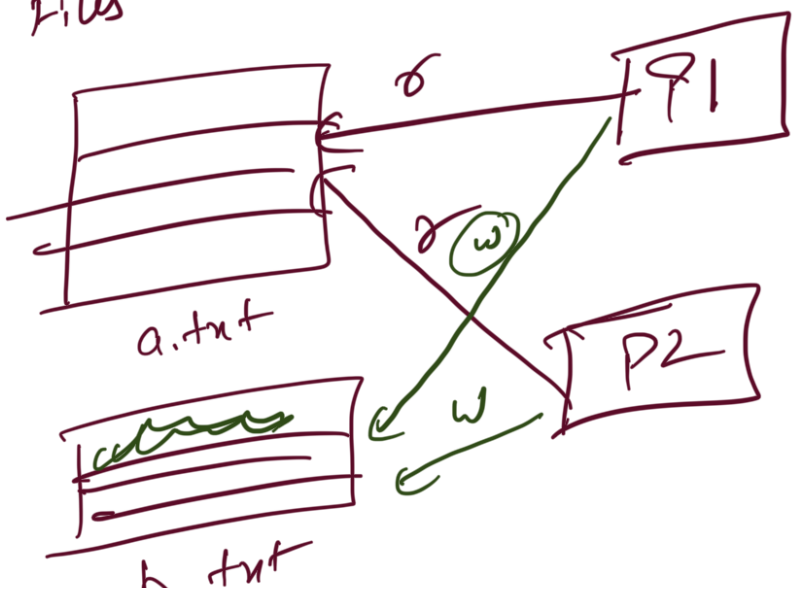

Utf-8

↳ Unicode Transformation ~~format~~ 8 bit

A-Z → 1 byte

B → ord()

Working with Files

Threads : allows you to run multiple Concurrent tasks easily.

Solution :- use lock() to manage shared resource.

threading.lock()

File Access Modes

1. Read only ('r')
2. Read and Write ('r+')
3. write only ('w')
4. Write and Read ('w+')
5. Append only ('a')

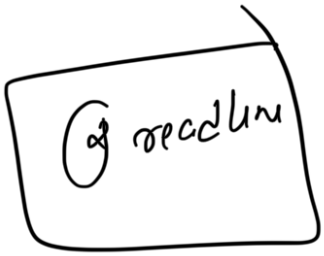

⑥ Append and read ( )

File writing

① write () ② writelines ()

File reading

① read

③ readlines

File Cursor :-

r = cursor starts at beginning

a = " " " end of file

→ seek (a, b)

↳ offset = no. of bytes

↳ whence = ref point

0 → beginning

1 → from Current Pos

2 → from end of file

→ tell = Returns the Current Cursor position (in byte)

... opening file

Smarter ways of

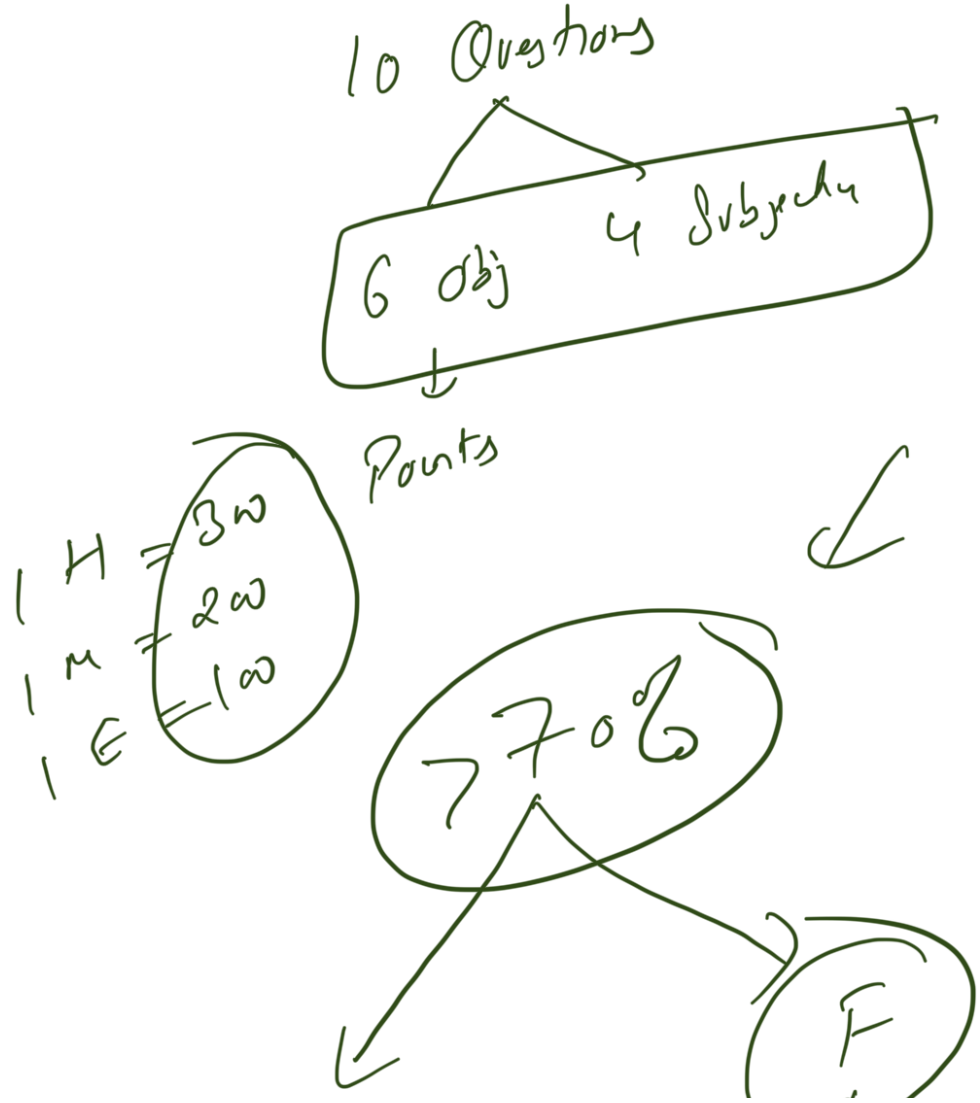

↳ 'with' → Statement

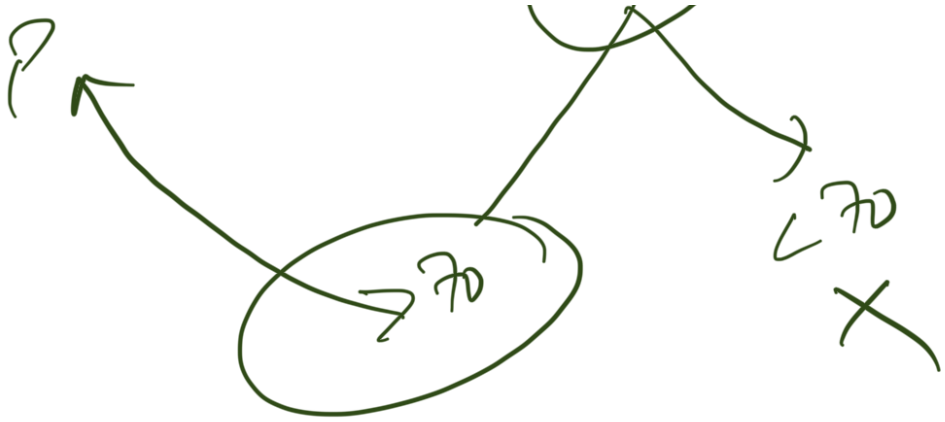

↳ better Syntax

↳ exception handling

Python Module test

Startinf date : 2025-09-05 21:00:00
